**Meteorological and
Geoastrophysical Abstracts**
is a monthly publication presenting,
in English, current meteorological
and geoastrophysical abstracts
gleaned from foreign and domestic
literature.

INTRODUCTION

The Cumulative Indexes to *Meteorological and Geostrophysical Abstracts*, Vols. 21-26 (1970-1975), are being issued in two volumes:

- 1) Author Index, approximately 35,000 entries,
- 2) Subject Index, approximately 40,000 entries (including place names).

These indexes will be of great usefulness for retrospective searching of *Meteorological and Geostrophysical Abstracts* for the years 1970-1975, and especially for the years 1972-1975 for which no annual indexes were published. Although the quality of these computer-produced indexes does not meet the standards maintained in previous cumulative indexes to *Meteorological and Geophysical Abstracts*, the indexes will save users much time in finding the material by a given author or on a particular subject. Better computer-generated, photo-composed cumulative annual indexes are being planned for Volume 27, 28, and 29 (1976, 1977, and 1978) so that users will have access to quick reference for the entire series of abstracts from 1950 through 1978.

Previously published cumulative annual indexes are available from the American Meteorological Society for each year (volume) from 1950 through 1971, except 1964. Cumulative 10-year author and geographic indexes are available for Volumes 1-10 (1950-1959) plus supplements, also from the American Meteorological Society. A cumulative Author and Systematic Subject Index for Volumes 1-20 (1950-1969) is available in nine volumes from G. K. Hall & Co.; this index gives up to five lines of citation and abstract for each entry.

In the present author and subject indexes, the reference codes in the entries are volume, issue, and item number. For instance:

Aagaard, Knut 21.12-757 refers to the author of an article abstracted in Volume 21 (1970), No. 12 (December), Item number 757

and

Abbot pyranometer 21.6-74 refers to an abstract on the subject in Volume 21 (1970), No. 6 (June), Item number 74.

There has been no attempt to correct errors in spelling or to combine identical authors or identical headings where a slight difference in keypunching (periods, hyphens, or other punctuation; abbreviations; initials rather than full first or other names; transliteration of Cyrillic; etc.) creates many inconsistencies that would likely be eliminated by a human compiler or editor. It is hoped that the number of actual errors is an acceptable minimum.

The compilation of these cumulative indexes has been made possible by an agreement between the American Meteorological Society (AMS) and the National Oceanic and Atmospheric Administration (NOAA): the latter sponsored the keyboarding and computerization of the indexes and furnished the camera-ready copy to the AMS for publication. The AMS is pleased to acknowledge NOAA's support that has permitted the AMS to computerize the data base and to photocompose monthly issues of *Meteorological and Geostrophysical Abstracts* in recent years.
